Re: LEEDS Information and Requirements - Recycled content of light gauge steel framing.

ClarkWestern Building Systems produces light gauge framing products with a minimum recycled content of 48%, of which 67% is post-consumer, 29% pre-consumer, and 4% post-industrial. The basic oxygen furnace (BOF) process is used to produce light gauge steel. ClarkWestern recycles nearly 100% of our post-industrial scrap. Our recycled content helps qualify your project for LEED Credit MR 4.

With 9 manufacturing facilities nationwide and the local purchasing of raw materials, projects usually fall within a 500 mile radius of our plant. The proximity of our plant will qualify ClarkWestern products for LEED Credit MR 5. Please refer to our website for the address of the manufacturing plant closest to your project.
